

In the Claims

Applicant has submitted a new complete claim set indicating marked up claims with insertions and deletions indicated by underlining and strikeouts, respectively.

1. (Currently amended) A sheet-form adhesive preparation characterized in that the quantity of heat required for the evaporation of water when exposed for 30 minutes to an atmosphere of 25°C and 60%Rh is 0.6 to 13 (cal) per unit area (cm²), and in that it contains 1 to ~~50~~ 30 wt% of a glycol.
2. (Canceled)
3. (Previously presented) The sheet-form adhesive preparation according to Claim 1 characterized in that the glycol has a polyether structure and is a polyethylene glycol having an average molecular weight of 200 to 600 and/or a polypropylene glycol having an average molecular weight of 500 to 3000.
4. (Canceled)
5. (Previously presented) The sheet-form adhesive preparation according to Claim 1 in which it is used as a sheet-form pack preparation.
6. (Canceled)
7. (Previously presented) The sheet-form adhesive preparation according to Claim 3 in which it is used as a sheet-form pack preparation.
8. (Previously presented) The sheet-form adhesive preparation according to Claim 4 in which it is used as a sheet-form pack preparation.

9. (Previously presented) The sheet-form adhesive preparation according to Claim 1, further comprising a polyhydric alcohol.

10. (Previously presented) The sheet-form adhesive preparation according to Claim 9 characterized in that the polyhydric alcohol is a low molecular weight polyhydric alcohol having 2 to 3 hydroxyl groups in its molecular structure.
